Висновок

В результаті виконання лабораторної я додав 2 нових класи до проєкту: TimeOS і Contents. Contents містить методи для роботи із заданим рядком, TimeOS описує об'єкт часу та містить статичні і нестатичні методи для роботи із такими об'єктами. Врешті, я перевірив працездатність додатку та коректність даних, що виводяться, на AVD та власному пристрої.
